ACKNOWLEDGEMENTS

The *Environmental/Chemical Thesaurus* is the latest effort to produce a useful index of terminology dealing with a broad scientific spectrum. The basis for this work is drawn from the *Environmental Terminology Index* (ORNL/EIS-72-22, Volumes I and II) and the *Environmental/Biomedical Terminology Index,* ORNL/EIS-98.

Kay L. Kannan, UCC-ND Computer Sciences Division at ORNL, provided the computer programming assistance needed to produce the thesaurus. She also provided advice on data processing and term relationships.

Marj Adler, EPA, provided the listings of terms for each EPA data base. Her helpfulness in providing a list of the numbers of terms in each data base and frequency of use made possible rational decisions about the inclusion of terms.

Preceding page blank

INTRODUCTION

The *Environmental/Chemical Thesaurus* approaches scientific language control problems from a multidisciplinary view. The *Environmental/Biomedical Terminology Index (EBTI)*, partially funded by the Energy Research and Development Administration, was used as a base for the present thesaurus. The *Environmental/Chemical Thesaurus*, funded by the Environmental Protection Agency, used as its source of new terms those major terms found in 13 Environmental Protection Agency data bases: Air Ecology System; Air Pollution Technical Information Center; Hardbound Book System, pre-August 1973 holdings; Hardbound Book System, August 1973 through December 1975 holdings; Document Control System; International Referral System; Noise Information Service; NTIS, EPA Reports Reporting System, 1975 data; NTIS, EPA Reports Reporting System, 1976 data; Organic Compounds in Drinking Water; Pesticides Technical/Library Research System; Water Quality Instructional Materials; and Solid Waste Information Retrieval System.

The scope of this thesaurus was broadened over that of the *Environmental/Biomedical Terminology Index* to include not only environmental and biomedical sciences, but also the physical sciences with emphasis placed on chemistry. The chemical portion of this thesaurus expands the terminology in the inorganic chemistry area over that presented in the *EBTI*. Specific chemical compounds are not included; only classes of chemicals are given. To adhere to this level of classification, drugs and pesticides are identified by class rather than by specific chemical name.

An attempt was also made to expand the areas of sociology and economics. Terminology dealing with law, demography, and geography was expanded. Proper names of languages and races were excluded. Geographic terms were expanded to include proper names for oceans, continents, major lakes, rivers, and islands. Political divisions were added to allow for proper names of countries and states. With such a broad scope, terminology for specific sciences does not provide for indexing to the lowest levels in plant, animal, or chemical classification.

A typical entry in the thesaurus consists of a main term in boldface type followed by a brief definition, use for terms (UF), preferred terms (USE), broader terms (BT), narrower terms (NT), and/or related terms (RT). Structure levels are indicated by one or more dots (...). Where entire word blocks have been taken from other sources, a four-letter code appears beneath the main term identifying the source. The key to the code is given on page viii.

POLYELECTROLYTES
POLYMERIC FLOCCULANTS THAT HAVE HIGH MOLECULAR WEIGHT ORGANIC CHAINS WITH IONIC OR OTHER FUNCTIONAL GROUPS INCORPORATED AT INTERVALS ALONG THE CHAINS. THEY HAVE CHARACTERISTICS OF BOTH POLYMERS AND ELECTROLYTES AND ARE HELPFUL IN REMOVING SUSPENDED SOLIDS FROM WASTEWATER.

REVERSE OSMOSIS
A PROCESS BEING CONSIDERED FOR TURNING SEWAGE INTO POTABLE WATER. IN REVERSE OSMOSIS, STRONG PRESSURE IS EXERTED ON THE SIDE OF THE GREATER CONCENTRATION. THE PRESSURE REVERSES THE NATURAL FLOW, FORCING MOLECULES OF PURE WATER THROUGH THE MEMBRANE.

TERTIARY TREATMENT
A PHYSICAL-CHEMICAL PROCESS AIMED AT REMOVAL OF ALL CONTAMINANTS. RAW SEWAGE IS CLARIFIED WITH CHEMICALS TO REMOVE SUSPENDED ORGANIC MATERIAL. THE EFFLUENT IS THEN PASSED THROUGH FILTER BEDS OF GRANULAR ACTIVATED CARBON. BETWEEN CLARIFICATION AND CARBON ADSORPTION, 90 PERCENT OR MORE OF THE PHOSPHATE IS REMOVED. CAPTURED ORGANIC MATTER IS BURNED. CARBON ADSORPTION ALSO REMOVES THE WATER FROM INDUSTRIAL CHEMICALS THAT PASS UNHINDERED THROUGH SECONDARY TREATMENT

TOXIC SUBSTANCES
USE OF A MORE SPECIFIC TERM RECOMMENDED
TOXICITY
THE QUALITY, STATE OR DEGREE OF BEING POISONOUS. ACUTE TOXICITY RESULTS FROM A SEVERE ATTACK OF POISONING DUE TO ONE OVER-EXPOSURE TO A SUBSTANCE. CHRONIC TOXICITY IS A CONDITION IN WHICH A SUBSTANCE ACCUMULATES IN THE BODY, OR ITS EFFECTS ARE ADDITIVE, BRINGING ON ILLNESS OR SOMETIMES DEATH. DERMAL TOXICITY IS A MEASURE OF THE AMOUNT OF POISON THAT CAN BE ABSORBED THROUGH THE SKIN OF AN ANIMAL TO PRODUCE TOXIC SYMPTOMS
